ABSTRACT

A quantitative trait related to the strength of sensing behavior associated with stimuli. Behavior is all human action caused by encouragement and psychological desires as well as the effect of society and culture. This study aims to determine whether there is an influence between pornographic access to adolescent sexual behavior in MTS "X" kalipare. The design used in this study is quantitative descriptive, with a cross sectional study design. The population is all MTS X students as many as 150 students, with a sample of 109 respondents taken Simple Random Sample using a questionnaire. Then analyzed by person / product moment test. From the results of the study, the results for the category of pornography access in Kalipare MTS X are mostly classified as rare as 72.5%, while the good category is 25.7%, and the category never is 1.8%. For the category of sexual behavior, the results were mostly classified as quite as much as 65.1%, while the good category was 34.9%, and the less category was 0%. Based on the results of the test person / product moment in getting the results ($p = 0,000 < 0,05$, H_0 is rejected). Then it is known that there is an influence between the influence of pornographic access to adolescent sexual behavior in MTS X in Kalipare village. Accessing pornography is a deviant behavior, because it is expected to be the basis for making policies related to the use of social media in students as well as supporting government policies related to efforts to combat cases of sexual deviation.

Keywords: Pornography Accessibility, Sexual Behavior, Teenagers

INTRODUCTION

The development of information and communication technology has become one of the efforts to realize an advanced and intelligent generation of Indonesians. Information and communication technology can be used as a tool for students to expand their knowledge and develop themselves in order to achieve quality life. But on the other hand, the existence of communication and information technology tools actually creates a negative threat to children's behavior¹⁻⁴.

Indonesia in 2012 reached 60 million people or around 23.5% of the total population and of that number,

40% of them accessed the internet more than 3 hours a day. The number of internet users who use mobile phones reaches 58 million. Based on data obtained from Internet World Stats in 2012 Indonesia is the number eight largest internet user in the world after China, America, India, Japan, Brazil, Russia and Germany with a total of 55,000,000 users out of a total population of 359 million or as many as 2.3% of world internet users.

Internet users in Indonesia in 2014 have reached 82 million people. With these achievements, Indonesia is ranked 8th in the world. Of the number of internet users, 80 percent of them are teenagers aged 15-19 years. For Facebook users, Indonesia is ranked 4th in the world. The survey results from Frontier Consulting Group, adolescents aged between 13-19 years in six major cities in Indonesia in 2011 showed that 91.2% of teenagers have social media accounts. This percentage increased in 2012 where as many as 97.5% of teenagers had social

media accounts⁵⁻⁷.

The mass media currently also shows a lot of shows that highlight the pornography aspect which is believed to be closely related to the increase in various cases of sexual violence. The progress of communication technology that occurs at this time, has resulted in almost no power capable of controlling or censoring news and entertainment including news or impressions that are included in the pornography category.

Data from Statistics Pornography shows that as many as 12% of sites on the internet contain pornographic content. Every second there are 28,258 people viewing pornographic sites and from all types of data downloaded on the internet 35% download content containing pornography. Data on age of access to pornographic sites aged 18-24 years is 13.61%, age 25-34 years is 19.90%, age 35-44 years is 25.50%, age 45 - 54 years is 20.67% and age 55 years and over as much as 20.32%, and the average age of children who first access porn site sites is 11 years.

Based on preliminary studies that have been carried out in MTS "X", the results show that the total number of 9th grade students is as much as 50 students consisting of A class with 25 students, class B with 25 students. According to one BK teacher, in the 2009/2010 school year there were 2 students who quit / resigned from school and it turned out that after being traced the student came out due to an unwanted pregnancy (KTD). in the 2015/2016 school year there was one student who was expelled from school because the student had an unwanted pregnancy (KTD). Researchers interviewed 25 students on the "X" MTS by asking the question "Do students access social media every day?", 90% said accessing social media every day and 10% said it was rare because they did not have the facilities to access social media. The purpose of this study was to determine whether there was an influence between pornographic access to adolescent sexual behavior in the "X" MTS kalipare.

RESEARCH METHOD

The design used in this study is quantitative descriptive, with a cross sectional study design. The population is all MTS X students as many as 150 students, with a sample of 109 respondents taken Simple

Random Sample using a questionnaire. Then analyzed by person/product moment test.

RESULTS

Subject Characteristics

Table 1. Characteristics of respondents in this study include age, sex, education, parent's job, access to pornography and sexual behavior.

| No | Karakteristik | ΣN | Σ% |
|----|--|---------------------------|-------------------------------------|
| 1 | Age (year) 13-17 | 109 | 100 |
| 2 | Gender Man Female | 48 61 | 44 56 |
| 3 | Education No school Elementary school Junior high school Senior high school University | 10 43 34 18 4 | 9,2 39,4 31,2 16,5 3,7 |
| 4 | Parent's job Government employees Employees Entrepreneur Farmer etc | 3 14 22 50 20 | 2,8 12,8 20,3 45,9 18,3 |
| 5 | Access to pornography Often Rarely Never | 28 79 2 | 25,7 72,5 1,8 |
| 6 | Sexual behavior Good Enough | 38 71 | 34,9 65,1 |
| | Total | 109 | 100 |

STATISTICAL TEST RESULTS

Table 2. Pearson Statistical Test/Momet product Pornographic Accessibility With Sexual Behavior

| Correlations | | | |
|--|---------------------|-----------------------|-----------------|
| | | Access to pornography | Sexual behavior |
| Access to pornography | Pearson Correlation | 1 | .681** |
| | Sig. (2-tailed) | | .000 |
| | N | 109 | 109 |
| Sexual behavior | Pearson Correlation | .681** | 1 |
| | Sig. (2-tailed) | .000 | |
| | N | 109 | 109 |
| **. Correlation is significant at the 0.01 level (2-tailed). | | | |

The table above explains that the results of the product moment/Pearson analysis test obtained a p value of 0,000 then H₀ is rejected and it can be concluded that there is an influence of pornographic access to adolescent sexual behavior in the “X” MTS Kalipare.

DISCUSSION

Pornography Accessibility at MTs “X” in Kalipare Village

According to this study that pornography access in the “X” Kalipare MTs is often as high as 25.7%, while the rare category is 72.5%, and the never category is 1.8%. Teenagers often engage in conversation around sex, promiscuity, love, recreation, and so on as a result of being accustomed to seeing pornographic scenes. Teenagers are often seen walking hand in hand, embracing the opposite sex, hugging in public places without being awkward and shy. The results of a survey conducted during 2010 by an NGO regarding the frequency of accessing pornographic sites in Indonesia showed that the Indonesian people were in the fourth place in the world who opened internet for pornographic sites. In 2008 and 2009, the survey showed that Indonesians accessing the internet with the keyword “sex” are usually between 14 and 16 years old and 30 to 45 years old and spread evenly throughout Indonesia.

Based on the research conducted by the author, there are students who conduct pornography behavior as there are students who abuse the internet to access pornographic things, there are students who save porn

videos from internet downloads on their mobile phones, there are students who watch porn videos at rest or at hours empty at school, there are students who imitate pornographic scenes due to accustomed to watching porn videos, there are students who are alone and embrace the shoulders in the school environment, and so on.

Adolescent Sexual Behavior at MTs “X” in Kalipare Village

According to the data presented in the previous chapter that adolescent sexual behavior in Kalipare “X” MTs is known that most are classified as sufficient, namely 71 respondents (65.1%).

Adolescent pornography behaviors are adolescent sexual behavior related to biological needs or sexual needs as well as things that influence it such as pornographic images and videos, which are based on emotional aspects that play a role namely sexual desire to get pleasure or enjoyment of sexual organs through intercourse, making love and dating. Another opinion says that the behavior of teenage pornography is all forms of sexual behavior that is influenced by pornographic content that gives rise to sexual fantasies that encourage someone to do pornographic behavior^{3,12,13} argues that in relationships especially during courtship, adolescents experience an increase in hormones inside themselves so that dreams or fantasies of sexual acts arise because of natural sexual desire, so that it requires channeling in a form of behavior. certain behavior.

The Influence of Pornography Accession to Adolescent Sexual Behavior in MTs "X" in Kalipare Village.

The results of the product moment / Pearson analysis obtained p value of 0.000 where 0,000 is less than 0.005, then H0 is rejected and it can be concluded that there is an influence of pornographic access to adolescent sexual behavior in MTS "X" Kalipare.

Increased sexual drive makes teenagers try to find various sexual information. From the information sources they managed to get, generally only a few teenagers get sexual ins and outs that are not necessarily appropriate, for example at school, discussing with friends, books on sex, mass media or the internet. Teenagers today can easily access sites, images or shows that smell porn through internet on their mobile phones.

Instilling religious norms is considered to have a very large role to face the globalization situation which results in a shift in the value of life. Teenagers who adhere to religious norms will be protected or able to withstand the adverse effects of their environment. In addition, sexual education can also be done to overcome adolescent sexual problems. Sexual education is a way of teaching that can help young people to deal with life problems because of sexual drive. This education intends to explain everything related to sex and sexuality in a reasonable form. In this case sexual education should ideally be given first time by parents at home, remembering that the one who knows best about the child's situation is his or her own parents¹³⁻¹⁷.

CONCLUSION

From the results of the questionnaire on pornography access, the majority of respondents rarely access pornography as many as 79 respondents (72.5%).

From the results of the questionnaire on sexual behavior, it was found that the majority of respondents had enough sexual behavior as many as 71 students (65.1%),

The results of the statistical test Effect of Pornography Accessibility on adolescent sexual behavior from statistical analysis obtained Pearson test results of 0,000 where 0,000 is less than 0.005 then H0 is rejected and it can be concluded that there is an influence of pornographic access to adolescent sexual behavior in the "X" MTS Kalipare.
